## IMAGING ASTEROID 4 VESTA USING THE FRAMING CAMERA

**KELLER, H. Uwe**<sup>1</sup>, NATHUES, Andreas<sup>2</sup>, CORADINI, Angioletta<sup>3</sup>, JAUMANN, Ralf<sup>4</sup>, JORDA, Laurent<sup>5</sup>, LI, Jian-Yang<sup>6</sup>, MITTFELDLT, David W.<sup>7</sup>, MOTTOLA, Stefano<sup>8</sup>, RAYMOND, C.A.<sup>9</sup>, and SCHRÖDER, Stefan E.<sup>2</sup>, (1) University Braunschweig, IGEP, Mendelssohnstrasse 3, Braunschweig, 38106, Germany, [keller@linmpi.mpg.de](mailto:keller@linmpi.mpg.de), (2) Max-Planck-Institut für Sonnensystemforschung, Max-Planck-Str. 3, Katlenburg-Lindau, 37191, Germany, (3) Istituto di Astrofisica Spaziale e Fisica Cosmica, Area Ricerca - Roma 2 Tor Vergata, Via Fosso del Cavaliere, 100, Rome, 00133, Italy, (4) German Aerospace Center (DLR) Berlin, Institute of Planetary Research, Rutherfordstrasse 2, Berlin, D-12489, Germany, (5) Laboratoire d'Astrophysique de Marseille, 38 rue Frederic Joliot-Curie, Marseille, F-13013 f, France, (6) Department of Astronomy, University of Maryland at College Park, College Park, MD 20742-242, (7) NASA, Johnson Space Center, mail code KR, 2101 NASA Parkway, Houston, TX 77058, (8) Dlr, Institute of Planetary Exploration, Rutherfordstr. 2, Berlin, 12489, Germany, (9) Jet Propulsion Laboratory, Pasadena, CA 91109

The Framing Camera (FC) onboard the Dawn spacecraft serves a dual purpose. Next to its central role as a prime science instrument it is also used for the complex navigation of the ion drive spacecraft. The CCD detector with 1024 by 1024 pixels provides the stability for a multiyear mission and its high requirements of photometric accuracy over the wavelength band from 400 to 1000 nm covered by 7 band-pass filters. Vesta will be observed from 3 orbit stages with image scales of 227, 63, and 17 m/px, respectively. The mapping of Vesta's surface with medium resolution will be only completed during the exit phase when the north pole will be illuminated. A detailed pointing strategy will cover the surface at least twice at similar phase angles to provide stereo views for reconstruction of the topography. During approach the phase function of Vesta was determined over a range of angles not accessible from earth. This is the first step in deriving the photometric function of the surface. Combining the topography based on stereo tie points with the photometry in an iterative procedure will disclose details of the surface morphology at considerably smaller scales than the pixel scale. The 7 color filters are well positioned to provide information on the spectral slope in the visible, the depth of the strong pyroxene absorption band, and their variability over the surface. Cross calibration with the VIR spectrometer that extends into the near IR will provide detailed maps of Vesta's surface mineralogy and physical properties. Georeferencing all these observations will result in a coherent and unique data set.

During Dawn's approach and capture FC has already demonstrated its performance. The strong variegation observed by the Hubble Space Telescope can now be correlated with surface units and features. We will report on results obtained from images taken during survey mode covering the whole illuminated surface. Vesta is a planet-like differentiated body, but its surface gravity and escape velocity are comparable to those of other asteroids and hence much smaller than those of the inner planets or

the Moon. The comparison with 21 Lutetia, recently passed by the Rosetta comet rendezvous mission, will reveal the effects of body differentiation on surface cratering and morphology and will at the same time improve our understanding of Vesta's interior.

**Abstract ID#:** 195598

**Password:** 624391

**Meeting:** 2011 GSA Annual Meeting in Minneapolis (9–12 October 2011)

**Session Type:** Topical/Theme

**Selection:** T217. *Dawn* at Vesta: Initial Results from the Survey Orbit

**Title:** IMAGING ASTEROID 4 VESTA USING THE FRAMING CAMERA

**Key Words:** Dawn mission, Vesta, Framing Camera, Geomorphology, Photometry

**Presentation Format:** Oral

**Discipline Categories:** Planetary Geology, Geomorphology, Geochemistry

**Scheduled For:**

**Abstract Submission Fee:** Paid (gsa-2011AM-5369-7923-9793-6562)

## First Author

### **Presenting**

H. Uwe Keller  
University Braunschweig, IGEP  
Mendelssohnstrasse 3  
Braunschweig, 38106  
Germany

**Office Phone:** N/A

**Email:** [keller@linmpi.mpg.de](mailto:keller@linmpi.mpg.de)

**Confirmation Email:** [keller@linmpi.mpg.de](mailto:keller@linmpi.mpg.de)

## Second Author

Andreas Nathues  
Max-Planck-Institut für Sonnensystemforschung, Max-Planck-Str. 3  
Katlenburg-Lindau, 37191  
Germany

**Office Phone:** 004955569790

**Email:** [nathues@mps.mpg.de](mailto:nathues@mps.mpg.de)

**Confirmation Email:** [nathues@mps.mpg.de](mailto:nathues@mps.mpg.de)

## Third Author

Angioletta Coradini  
Istituto di Astrofisica Spaziale e Fisica Cosmica  
Area Ricerca - Roma 2 Tor Vergata  
Via Fosso del Cavaliere, 100  
Rome, 00133  
Italy

**Office Phone:** 390649934452

**Email:** [angioletta.coradini@iasf-roma.inaf.it](mailto:angioletta.coradini@iasf-roma.inaf.it)

## Fourth Author

Ralf Jaumann  
German Aerospace Center (DLR) Berlin, Institute of Planetary Research  
Rutherfordstrasse 2  
Berlin, D-12489  
Germany  
**Office Phone:** 0049 30 67055400  
**Email:** [ralf.jaumann@dlr.de](mailto:ralf.jaumann@dlr.de)  
**Confirmation Email:** [ralf.jaumann@dlr.de](mailto:ralf.jaumann@dlr.de)

## Fifth Author

Laurent Jorda  
Laboratoire d'Astrophysique de Marseille  
38 rue Frederic Joliot-Curie  
Marseille, F-13013 f  
France  
**Office Phone:** 0033-491-05 6906

**If necessary, you can make changes to your abstract between now and the deadline of Tuesday, July 26 2011.**

- To access your submission in the future, use the direct link to your abstract submission from one of the automatic confirmation emails that were sent to you during the submission.
- Or point your browser to <http://gsa.confex.com/gsa/reminder.cgi> to have that URL mailed to you again. Your username/password are 195598/624391.

Any changes that you make will be reflected instantly in what is seen by the reviewers. You DO NOT need to go through all of the submission steps in order to change one thing. If you want to change the title, for example, just click "Title" in the abstract control panel and submit the new title.

**When you have completed your submission, you may close this browser window.**
